PROFILE

I build complete products end-to-end, from database schema to production UI. Originally a mechanical engineer and fusion energy researcher, I bring a first-principles mindset to software. Over 10 years shipping production systems across 6+ greenfield products for brands like Primark and SuperDry. Currently driving a ground-up platform rewrite, replacing a legacy system spanning 10 databases with a modern .NET and Angular stack.

EXPERIENCE

CORE (UK) Ltd → TariffTel

Trade compliance software for global brands

📅 Jun 2014 – Present

Joined as a junior developer. Grew into a senior architect across 6+ greenfield product builds, a company rebrand, and a major platform rewrite, all within a small, high-ownership team.

Senior Developer / Architect 2022 – Present

- Architecting TariffTel 2.0: ground-up rewrite of a 10+ year legacy platform (WebForms, WinForms, millions of lines of SQL across 10 database repos) into .NET 8/10 and Angular 19. Clean Architecture, CQRS, SignalR, Entra ID SSO. Built from scratch in under a year.
- Delivered a new Master Data Management System on .NET 10 with a custom CQRS dispatcher and Dapper for performance-critical paths.
- Own architectural decisions, mentor developers, and step into the tech lead role when needed.

Developer 2017 – 2022

- Built **Customs Connect**: customs declaration software for Primark. Rebuilt v2 as a serverless Azure Functions app integrating classification and supply chain data to automate declarations.
- Built **LEAF**: sustainability reporting platform (fibre origin tracking, SCAP scheme). Adopted by Primark; being evaluated by SuperDry before their restructure.
- Built **TariffTel Essentials** (B2C classifier) and later **TariffTel Premium** (B2B, built single-handedly), which laid the groundwork for the TariffTel 2.0 rewrite.

Junior Developer 2014 – 2017

- Supply chain and classification software for Primark, SuperDry, Triumph Motorcycles. First greenfield project: sustainability reporting for Primark's SCAP fibre-origin programme.

SIDE PROJECTS

CodeMop: AI code review tool (Python/FastAPI/PostgreSQL). Hooks into GitHub PRs and suggests improvements automatically.

DevSync: Multi-tenant snippet manager with team collaboration. Next.js 16, PostgreSQL full-text search, NextAuth, RBAC, Docker.

EV Fleet Platform: .NET 8 fleet API + Python/Flask optimization engine using Google OR-Tools for vehicle routing.

WHAT I BRING

- Ship complete products**: database to UI, auth to deployment, working solo or in a team.
- Design systems that last**: Clean Architecture, CQRS, modular boundaries, tested and documented.
- Pick up anything**: C#, TypeScript, Python, React, Node. Whatever the problem needs.
- Move fast, don't cut corners**: Docker, CI/CD, automated tests, and structured logging from day one.

TECH

EDUCATION

MSc Fusion Energy

University of York

📅 2018 – 2019

BEng Mechanical Eng. (Hons)

Cardiff University

📅 2007 – 2013

Career pivot from engineering to software. I taught myself to code and apply a physicist's rigour to system design.

LANGUAGES

English
Hungarian
Spanish

OUTSIDE WORK

Climbing, mountaineering, caving, outdoor swimming, music (guitar, bass, piano).
